Safety Instructions

Safety Instructions • English

WARNING: This symbol, ⚠, when used on the product, is intended to alert the user of the presence of uninsulated dangerous voltage within the product's enclosure that may present a risk of electric shock.

ATTENTION: This symbol, ⚠, when used on the product, is intended to alert the user of important operating and maintenance (servicing) instructions in the literature provided with the equipment.

For information on safety guidelines, regulatory compliances, EMI/EMF compatibility, accessibility, and related topics, see the Extron Safety and Regulatory Compliance Guide, part number 68-290-01, on the Extron website, www.extron.com.

Instructions de sécurité • Français

avertissement: Ce pictogramme, ⚠, lorsqu'il est utilisé sur le produit, signale à l'utilisateur la présence à l'intérieur du boîtier du produit d'une tension électrique dangereuse susceptible de provoquer un choc électrique.

ATTENTION: Ce pictogramme, ⚠, lorsqu'il est utilisé sur le produit, signale à l'utilisateur des instructions d'utilisation ou de maintenance importantes qui se trouvent dans la documentation fournie avec le matériel.

Pour en savoir plus sur les règles de sécurité, la conformité à la réglementation, la compatibilité EMI/EMF, l'accessibilité, et autres sujets connexes, lisez les informations de sécurité et de conformité Extron, réf. 68-290-01, sur le site Extron, www.extron.fr.

Sicherheitsanweisungen • Deutsch

WARNUNG: Dieses Symbol ⚠ auf dem Produkt soll den Benutzer darauf aufmerksam machen, dass im Inneren des Gehäuses dieses Produktes gefährliche Spannungen herrschen, die nicht isoliert sind und die einen elektrischen Schlag verursachen können.

VORSICHT: Dieses Symbol ⚠ auf dem Produkt soll dem Benutzer in der im Lieferumfang enthaltenen Dokumentation besonders wichtige Hinweise zur Bedienung und Wartung (Instandhaltung) geben.

Weitere Informationen über die Sicherheitsrichtlinien, Produkthandhabung, EMI/EMF-Kompatibilität, Zugänglichkeit und verwandte Themen finden Sie in den Extron-Richtlinien für Sicherheit und Handhabung (Artikelnummer 68-290-01) auf der Extron-Website, www.extron.de.

Instrucciones de seguridad • Español

ADVERTENCIA: Este símbolo, ⚠, cuando se utiliza en el producto, avisa al usuario de la presencia de voltaje peligroso sin aislar dentro del producto, lo que puede representar un riesgo de descarga eléctrica.

ATENCIÓN: Este símbolo, ⚠, cuando se utiliza en el producto, avisa al usuario de la presencia de importantes instrucciones de uso y mantenimiento recogidas en la documentación proporcionada con el equipo.

Para obtener información sobre directrices de seguridad, cumplimiento de normativas, compatibilidad electromagnética, accesibilidad y temas relacionados, consulte la Guía de cumplimiento de normativas y seguridad de Extron, referencia 68-290-01, en el sitio Web de Extron, www.extron.es.

Introduction

This user guide contains information about the Extron FF 220T Flat Field speaker. This speaker is designed for use in plenum rated ceiling spaces and can be dropped into a square (2-foot by 2-foot or 600 mm by 600 mm) or rectangular (2-foot by 4-foot or 600 mm by 1200 mm with supplied cross bars) false ceiling tile space on a T-bar grid.

The FF 220T features a low profile design that houses a 3-inch driver and has the appearance of a standard ventilation grill. All the drivers and components above the ceiling are hidden behind the grill.

Features

- Drop-in ceiling tile speakers for suspended ceilings
- UL 2043 plenum rated enclosure
- Extron patent pending Flat Field technology for consistent sound levels across the listening area, reducing the number of speakers required
- A 3-inch (7.6 cm) horn-loaded, full range driver provides extended low frequency response.
- The white perforated grille matches the appearance of air conditioning vents.
- 8 ohm direct or 70/100 volt operation with 16, 8, 4, 2, and 1 watt selectable power taps accessed with speaker wiring connections inside the rear panel
- Frequency response of 68 Hz to 18 kHz
- 16 watts continuous pink noise, 32 watts continuous program rated
- Wide 170° dispersion
- Low profile enclosure for plenum environments
- 5 year parts and labor warranty

Application Example

The illustration below is one example of configuring a system using the FF 220T speakers.

Figure 1. FF 220T Application Diagram

Installation

The Installation section describes:

- [Installation Considerations](#)
- [Installing the Speaker](#)

Installation Considerations

ATTENTION: Installation and service must be performed by authorized personnel only.

NOTE: The FF 220T comes in two ceiling tile configurations depending on the tile unit of measurement:

- US version (part #42-141-03) — Drops into 2-foot x 2-foot (61 cm x 61 cm) or 2-foot x 4-foot (61 cm x 122 cm) suspended tile ceilings
- Metric version (part #42-141-23) — Drops into 60 cm x 60 cm (1.97-foot x 1.97-foot) or 60 cm x 120 cm (1.97-foot x 3.94-foot) suspended tile ceilings

Be sure to order the correct part number as the two configurations are not interchangeable and will not fit correctly.

Installation of conduit and conduit adapters must conform to all applicable building codes and local ordinances.

- Installation in a plenum-rated environment requires a wire gauge of 12 AWG to 18 AWG. Conduit may be required.

NOTE: If you are daisy chaining speakers in 70 V or 100 V configuration, the maximum wire gauge is 16 AWG. If you are daisy chaining speakers in direct (8 ohm) configuration, the maximum wire gauge is 14 AWG.

- If using secondary attachment points, the installer must provide the cables.
- Wiring connections depend on whether or not a distributed (70 or 100 volt) audio system is installed with these speakers.

Installing the Speaker

1. **Power down** — Power down all attached devices before proceeding.
2. **Remove the suspended ceiling tile** — Remove the square ceiling tile where the FF 220T will be installed as shown below. If the ceiling has rectangular tiles, cut the tile in half.

3. **Remove the terminal cover plate** — Loosen (do not remove) the two screws on the top terminal cover plate and remove the cover plate as shown below.

Figure 2. Removing the Terminal Cover Plate

4. **Routing cables through the transformer cover plate** — Slide and remove the terminal cover plate. The transformer cover plate is mounted to the speaker with the transformer side down. See the illustration below.

Figure 3. Routing the Cables Through the Cover Plate

5. **When using flexible conduit** — Route the wires through the conduit. Insert the conduit into the cover plate opening using an appropriate conduit adapter, and secure the conduit to the plate. Pull the wires out of the conduit and through the cover plate. See the figure below.

Figure 4. Flexible Conduit Wiring

NOTE: Installation of conduit and conduit adapters should conform to all applicable building codes and local ordinances.

When using speaker wires without a conduit — Secure the cable clamp adapter (included) to the cover plate and insert the wires through the clamp. Tighten the clamp screws. See the following illustration.

Figure 5. Wiring Without Conduit

6. Proceed to step 7 (going through the transformer) or 9 (bypassing the transformer) for the appropriate wiring procedure for either a distributed audio system (70 V or 100 V line distribution through the transformer) or for a direct connection from an amplifier (bypassing the transformer).

NOTE: In the 70 V or 100 V distribution system block diagram below, an optional speaker has been added as an example of daisy chaining FF 220T speakers to a single amplifier output.

Wiring for Installation in a 70 V or 100 V Audio Distribution System (through the transformer)

7. Connect cables from the amplifier to the transformer on the FF 220T terminal cover plate.

Figure 6. 70 V or 100 V Distribution System

- a. If a conduit is used, pull the wires from the amplifier through and out of the conduit.

- b. Route the two wires from the amplifier through the cover plate hole to the transformer side.
- c. Strip 3/16 inch (5 mm) from the wire ends and keep the wire end strands together by twisting them. Do not tin the wires.
- d. Secure the wires to the appropriate taps on the captive screw connectors of the seven-connector terminal block (on the transformer side of the cover plate) as indicated on the tap label. See the note below.

NOTE: Observe the 70 V or 100 V system designation as indicated on the tap label.

70 V	COM	16 W	8 W	4 W	2 W	1 W	NC
100 V	COM	NC	16 W	8 W	4 W	2 W	1 W

When wiring to a single speaker, the black negative (-) wire attaches to the “COM” terminal, and the red positive (+) wire attaches to the desired terminal tap. See below.

Figure 7. Wiring to a Single Speaker

- e. Use a small flat blade screwdriver to tighten the terminal block screws.
- f. To wire additional speakers, route the speaker wires from the second speaker through the cover plate hole to the transformer side. Twist the black negative (-) wires together and the red positive (+) wires together before inserting them into the terminal block. Additional speakers can be daisy-chained this way. See below.

Figure 8. Wiring to Additional Speakers

8. Connect wires from the transformer to the speaker.
 - a. Keep the wire strands together by twisting them (do not tin the wires).
 - b. Connect the red positive (+) wire to the + speaker terminal and connect the black negative (-) wire to the - speaker terminal as shown below.

Figure 9. Wiring the Speaker to the Transformer

- c. Proceed to step 10.

Wiring for Installation with Direct 8 ohm Connection to an Amplifier (bypassing the transformer)

9. See the block diagram below.

Figure 10. Direct 8 Ohm Connection

- a. Route the wires from the amplifier to the speaker using the same procedure for routing speaker wire (and conduit if applicable) through the cover plate as described in step 5. Strip 3/16 inch (5 mm) from the ends of the two speaker wire leads (+ and -) coming from the amplifier. Keep the wire strands together by twisting them (do not tin the wires), and secure the wires to the input terminals of the speaker, observing the correct polarity.

- b. Connect the red positive (+) wire to the + speaker terminal and the black negative (-) wire to the - speaker terminal depending on whether one or two speakers are being connected.

Figure 11. Wiring the Speaker Terminals

Finishing Steps, All Installation Types

10. Replace the transformer cover plate and tighten the two cover plate screws that were loosened in step 3.
11. Temporarily test the system and speakers by powering on the amplifier and listening for the correct response from the speakers, then disconnect power from the amplifier.
12. For installation in a square ceiling grid, remove a tile and place the speaker on the existing support rails and position it so that the speaker edges are hidden by the support rails, as shown below.

Figure 12. Installation in a Square Ceiling Grid

For installations in a rectangular ceiling grid, replace half of the rectangular tile which was cut in half in step 2. Install the supplied T-rail crosspiece, then place the speaker on the grid and position it so that the speaker edges are hidden by the support rails and T-rails, as shown below.

Figure 13. Installation in a Rectangular Ceiling Grid

- 13.** If secondary support cables are being used, install them. See the illustration below.

NOTE: Observe all applicable building codes and local ordinances when installing the speaker.

Figure 14. Installing a Secondary Support Cable

- a.** Temporarily remove a ceiling tile adjacent to the speaker and set it aside.
 - b.** Connect a secondary support cable through the cable pass through loop, and attach it to one of the bend-up tabs located on either side of the speaker.
 - c.** Attach the other end of the cable to a sturdy part of the building (studs, roof struts, or the like).
 - d.** For additional support lines repeat as needed.
 - e.** Replace all ceiling tiles.
- 14.** Check all wiring before powering up the amplifier.
